

REFERENCE – heating water Housing complex Rue du Dr. Pierre Schmidt, 67150 Erstein, France

products: HB heating optimizer 1"

This historic mansion has been recently redesigned and renovated with enthusiasm by its owner.

Now, 6 cozy apartments are integrated in the house, the whole is surrounded by a beautiful and quiet park.

At the end of the renovation work, however, people were not satisfied with the drinking water supply and the heating system.

The central heating system is powered by a gas boiler and the heat is emitted via radiators. The heating water was muddy and black as expected. After being treated with chemical products, the result was unconvincing to everyone involved.

The installer then tried out an EWO heating system vitalizer HB 1 " in one of the heating circuits. He first wanted to make sure that the EWO technology really worked as well as promised. Before installation, a water sample was also taken for comparison purposes.

ewolution of water

Four weeks later, a second water sample was taken, now the heating water was much clearer. After another 2 months, a third water sample was taken and finally the heating water was crystal clear.

The customer was now completely satisfied and also convinced.

Once again, EWO technology has proven its effectiveness. The plumber is very satisfied, the customer was thrilled and after this first heating circuit had the entire system equipped with EWO.
