

REFERENCE – drinking water / heating water Housing complex, 6112 Wattens, Austria

Products: CLASSIC

Experiences drinking water:

„In 1999 we built an apartment building with 3 residential units in Wattens.

Since I am an installer myself, the focus from the start was on the area of heating / sanitation / drinking water. In addition to using the highest quality materials (stainless steel / copper), water treatment was particularly important to me. After extensive research, the decision was made to choose EWO CLASSIC.

Since we traveled a lot and lived in Vienna again and again at this time, we were always able to determine the difference in quality compared to untreated water. When drinking, there was always a better and fresher taste. That's why we drink more water.

The water feels noticeably softer and more pleasant when showering, bathing and especially washing hair.

Laundry is cleaned more gently and often makes fabric softener unnecessary.”

Experiences heating system:

„Our heating system was also filled with EWO water right from the start. Today, after more than 20 years, this heating water is as clear as on the first day. The system has 450m2 of underfloor heating and to date no clouding or slagging is visible.

Based on our many years of experience, we can only recommend the EWO CLASSIC system and would choose it again at any time.

We were also impressed by the environmental friendliness. The system requires no electricity or chemicals and is therefore maintenance-free.”
